SUMMARY

Data Analytics undergraduate at Newton School of Technology with hands-on experience in end-to-end data pipelines, exploratory analysis, and business intelligence dashboarding. Proficient in Python-based ETL, statistical analysis, and Tableau Public visualisation. Demonstrated ability to convert raw datasets into actionable insights through academic projects.

TECHNICAL SKILLS

Languages:	Python, SQL
Libraries:	Pandas, NumPy, Matplotlib, Seaborn
Visualisation:	Tableau Public, Looker Studio, Excel, Google Sheets
Analytics:	Data Cleaning, EDA, Statistical Analysis, Dashboarding, KPI Design
Tools & Platforms:	GitHub, Google Colab, Jupyter Notebook

EDUCATION

Bachelor of Technology — Computer Science & Artificial Intelligence 2024 — 2028

Newton School of Technology, Rishihood University | CGPA: 7.97 / 10.0

Intermediate (Class XII) — Narayana Junior College 2022 — 2024

Grade: 91.7%

Matriculation (Class X) — Motessori High School 2021 — 2022

Grade: 91.3%

PROJECTS

CreditSense — Default Risk Intelligence Apr 2026 — Present

Tools: Python (Pandas, NumPy, Matplotlib, Seaborn), Tableau Public, GitHub | View Dashboard →

- Analysed 30,000 credit card client records (UCI Taiwan dataset) to identify key drivers of payment default using a Python-based ETL pipeline across 5 structured Jupyter notebooks.
- Identified undocumented categorical encodings in EDUCATION and MARRIAGE columns — treated as implicit missing values and resolved via mode imputation, improving data integrity.
- Engineered credit utilisation ratio and rule-based risk tier segmentation (High / Medium / Low) to enable dashboard-level customer profiling.
- Built interactive Tableau Public dashboard with segment-level filters enabling credit risk managers to identify high-risk customer cohorts at a glance.
- Delivered 3 actionable business recommendations backed by statistical hypothesis testing (t-test, chi-square) and correlation analysis.

Rossmann Store Sales Analytics Dashboard 2025

Tools: SQL, Excel, Google Sheets | View Dashboard →

- Analysed Rossmann retail store sales data across multiple store types, assortment levels, and promotional periods to identify revenue drivers and demand patterns.
- Built an 8-chart interactive dashboard covering average daily sales, customer traffic by day of week, promotion lift (82%), and sales contribution by store type.
- Discovered that Store Type A drives 56.3% of total revenue and promotions increase average sales by approximately 90%, providing actionable stocking and scheduling recommendations.
- Implemented Competition Distance and Day-of-Week filters enabling store managers to perform granular operational drill-downs.
